

The Performance Clutch and Flywheel Specialists

Application Guide

**The Performance
Clutch and Flywheel
Specialists**

Application Guide

Stage 1 Organic

Primarily designed for high performance road-going vehicles. The stage 1 clutch kit delivers substantial increases in performance and power holding capabilities whilst retaining factory type drivability.

Recommended for: Street Performance and Towing

Stage 2 Cushioned and Solid Ceramic

The stage 2 clutch uses Xtreme Ceramic technology in a single plate configuration that is either cushioned or a solid button style clutch plate. Mated to a high performance pressure plate the stage 2 clutch is for road and track going vehicles that require a higher level of power holding capability. Clutch engagement is more positive.

Recommended for: Street and Track Use

Ceramic Race Series

The ceramic race series is a race-only clutch. Designed in 3 variants of single, twin and triple plates this modular clutch also has 3 different diameter clutches available to match vehicle power levels, delivering an entirely motorsport related feel on engagement, the ceramic race series is for serious completion use at all levels.

Recommended for: Race Vehicles

Carbon Series

Xtreme applications to 1600HP require an Xtreme Carbon multi-plate clutch. Available in single, twin and triple configurations, the carbon series multi-plate is a race-only product for Xtreme power levels but whilst also delivering good drivability.

Recommended for: Xtreme powered vehicles requiring improved modulation

**The Performance
Clutch and Flywheel
Specialists**

Application Guide

Lightweight

Xtreme Chromoly lightweight flywheels are explosion-proof and have been SFI tested and approved. Xtreme flywheels come with integral ring gear and timing sensor ring as required by the application.

Ultra Lightweight

Xtreme Ultra light Chromoly flywheels are the lightest possible flywheel to suit any given clutch pattern, but still carry full SFI safety approval. Xtreme ultra light chromoly flywheels are designed for race track use where it is critical to minimise rotational inertia.

Drift / Drag weighted

Xtreme flywheels are also available in 'weighted' variants for selected applications. These flywheels are made from the same materials as Xtreme chromoly lightweight flywheels, but have increased mass compared with their standard equivalent to suit applications such as drift and drag racing.

Aluminium

Xtreme Aluminium Flywheels are lightweight to reduce the inertia and improve throttle response, quicker shift times between gears and enhanced acceleration. These have a replaceable insert which are also available in stock.
